ZOOS VICTORIA ANNUAL REPORT

ANIMAL WELFARE PEER REVIEW COMMITTEE REPORT 2009-10

01 Introduction

It is with pleasure that I present the third report of the Zoos Victoria Animal Welfare Peer Review Committee. The Committee was established in 2008 by the Zoos Victoria Board to deliver improved accountability and transparency for animal welfare related matters for Melbourne Zoo, Healesville Sanctuary and Werribee Open Range Zoo.

Guided by a Terms of Reference, the Committee's role is to:

- + Confirm that the internal Zoos Victoria processes and protocols for handling complaints in relation to animal welfare are satisfactory and of a quality deemed appropriate
- + Consider, monitor and review compliance with Zoos Victoria's internal processes and protocols for the reporting and investigation of issues arising from complaints or concerns about animal welfare issues within the three properties, and
- + Peer-review the decision made and conclusions drawn from any investigation into issues arising from complaints or concerns about animal welfare within the three properties.

02 Membership

The Zoos Victoria Animal Welfare Peer Review Committee comprises seven members who possess a genuine interest and commitment to animal welfare. Members have nominated to represent the following categories:

- + Person(s) qualified in veterinary sciences with experience relevant to captive wildlife management
- + Person nominated by the RSPCA
- + Person(s) with substantial recent experience in captive management of animals who is not employed or otherwise by Zoos Victoria
- + Lay person(s) being independent community members with commitment to animal welfare including one who is qualified to practise law, and
- + Two persons representing the Zoos Victoria Board.

The Chairperson of the Committee is a current member of the Zoos Victoria Board.

03 Activities

The Committee met on four occasions during the report period. The Committee confirmed currency of the Terms of Reference for the Committee, and endorsed revised associated Policy and Procedure documents.

The Committee was presented with an overview of reports on three animal welfare incidents: Eastern Barred Bandicoot, Black-capped Capuchin and Australian Fur-seal.

The incident relating to the Black-capped Capuchins was resolved without the need for an investigation. For the other two, the Committee was provided with an overview of the completed investigations. For all three incidents the Committee considers that the actions and investigations were undertaken consistent with Zoos Victoria internal processes, and endorsed the recommended actions.

Key activities undertaken by the Committee

- + The Committee reviewed draft versions of the Zoos Victoria Animal Welfare Code
- + The Committee noted quarterly Animal Care Reports and the annual Animal Health Report
- + The Committee was briefed regarding Emergency Procedures at Melbourne Zoo, Healesville Sanctuary and Werribee Open Range Zoo and provision of animal welfare during emergency situations
- + The Committee was advised of welfare considerations made in planning for the birth of the Asian Elephant
- + The Committee inspected Melbourne Zoo's facilities for tigers and elephants, providing the opportunity to see the four Sumatran Tiger cubs, Mali the Asian Elephant calf and meet with staff who were about to undertake an artificial insemination procedure on a female elephant
- + The Committee continues to monitor implementation of all actions recommended in incident reports.

04 Inventories

I attach the animal inventories for the three Zoos Victoria properties. The Inventories Report documents changes to animal numbers between 1 July 2009 and 30 June 2010, and the total collection as at 30 June 2010. The statistics support high levels of animal care across Zoos Victoria that are consistent with industry standards.

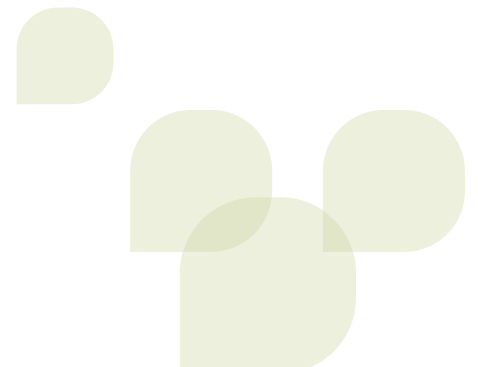

05 Conclusion

The Animal Welfare Peer Review Committee looks forward to playing an important role helping Zoos Victoria deliver open and accountable reporting and the implementation of Industry best practice policies and procedures in 2010-11 and beyond.

Dr Kimberley Dripps
Chairperson

Animal Welfare Peer Review Committee
Zoological Parks and Gardens Board
21 July 2010

ANIMAL WELFARE RELATED INCIDENTS 2009-10

Since 1 July 2009, three incidents have been reported. Two incidents involved the death of an animal and investigations were completed consistent with Zoos Victoria procedures.

Eastern Barred Bandicoot

Melbourne Zoo has actively contributed to the Recovery Program for Eastern Barred Bandicoots and maintains a successful breeding colony. This colony has been the source of animals for release. In order to determine fitness of animals prior to release, weights are monitored to enable assessment of body condition. A well-documented process has been established for weighing and recording of weights of Eastern Barred Bandicoots. Following such a procedure, two bandicoot boxes were noted in an enclosure. Upon inspection it was determined that bandicoots were locked inside the boxes and had not been released following catch-up for a health check. Both bandicoots subsequently died.

The report on this incident made six recommendations including:

- + Review and amendment of all procedural documents relating to management of Eastern Barred Bandicoots, ensuring that these include robust processes for checking of boxes
- + Review and amend training process for keepers working on the 'EBB Round' to ensure that roles and responsibilities are clearly understood and that staff have demonstrated required competencies
- + Provide additional training to nominated staff working on the 'EBB Round'
- + Counsel staff involved with this incident
- + Remind all keepers working on the Australian Natives Section of the need to read the Daily Report Log at the start of each day, and
- + Assess current workloads for staff working on the Australian Native Section.

Black-capped Capuchin

Black-capped Capuchins are a medium-sized South American primate that live in multi-male, multi-female groups with sub-adult males sometimes forming sub-groups. During 2008 Melbourne Zoo acquired three adult males and four adult females; the males coming from one zoo, and the females from another. These seven animals were introduced to form a breeding group. One of the three males has established dominance over the other two males. Over time, the frequency and intensity of aggressive interactions has escalated. In order to resolve the situation plans were made to provide additional housing. The space would be available following transfer of some macaques to Tasmania, but this shipment was delayed due to concerns of Tasmanian wildlife agencies. The lack of resolution prompted reporting of the situation by keeping staff. A meeting was held involving key Melbourne Zoo staff, and plans were made for the immediate re-housing of the two males that were being subjected to aggressive interactions. The re-housing occurred within 24 hours of the meeting.

In response to this incident two recommendations were made:

- + Transfer of Lion-tailed Macaques and Black and White Ruffed Lemurs to enable the two Black-capped Capuchins Simon and Carlos to be moved out of the Capuchin group
- + Counsel staff member regarding appropriate response methods to animal welfare concern reports.

Australian Fur-seal

Wild seals requiring treatment for injuries or other medical intervention are routinely brought to Melbourne Zoo for care. Zoo staff also provide assistance to staff from the Department of Sustainability and Environment (DSE) with the restraint, capture and transfer of wild seals, including responding to entanglement cases. On 26 January an Australian Fur-seal with an injured flipper was brought from Frankston to Melbourne Zoo. On 2 February this seal was assessed as 'fit for release'. Consultation occurred with DSE regarding a suitable release site, and Queenscliff was agreed. The seal was transferred in a 'pet-pack' via road to a release site at Queenscliff. On opening the 'pet-pack' to release the seal, the seal was found to have died during transportation from the Zoo to the release site.

Findings and Recommendations

The report on this incident made two recommendations including:

- + Development of Zoos Victoria 'Procedures for transporting animals.' This document should clearly identify accountabilities associated with the transport of animals and include the need for risk assessment and contingency plans in the event of an emergency and identify ability and responsibility of persons involved, and
- + Review appropriateness of all Zoos Victoria vehicles used for animal transport, and as appropriate modify vehicles.

In addition counselling of the staff involved is to occur regarding duty of care to animals.

The Animal Welfare Peer Review Committee on reviewing the incident report noted:

- + The failure in the basic duty of care to this animal by the staff involved
- + That recommended actions are comprehensive, and
- + That the recommended actions would be expected to prevent a similar incident from occurring.

OVERVIEW OF ANIMAL INVENTORY

Overview of Animal Inventory

As at 30 June 2010 Zoos Victoria's living animal collection¹ numbers over 2700 individual animals and includes some 330 species. The following points are noted relative to the changes in animal collection numbers during the reporting period:

- + Significant achievement of Healesville's Sanctuary's Threatened Species Unit including successful breeding of 35 Orange-bellied Parrot, 36 Helmeted Honeyeater, 24 Tasmanian Devil and 7 Mountain Pygmy-possum
- + Acquisitions of animals to support ASMP² managed species programs including African Wild Dog and Giraffe at Werribee
- + Successful breeding to support ASMP managed species programs including Red Panda, Sumatran Tiger and Asian Elephant at Melbourne Zoo
- + Releases into the wild to support Recovery Programs, including Orange-bellied Parrot, Helmeted Honeyeater and Eastern Barred Bandicoot and
- + Acquisition of six marine invertebrate species and 16 marine fish species for display in the Wild Sea exhibit at Melbourne Zoo.

The annual inventories report a total of 502 births at the three properties. Breeding typically occurs to support either in-house management programs, collaborative species management programs or Recovery Programs.

Over 700 animal transfers are reported including nearly 350 acquisitions and over 430 dispositions. Whenever animals are transferred to/from Zoos Victoria properties there is a need to satisfy any permitting requirements of legislative agencies.

The annual inventory reports the death of 416 animals across the three properties. Detailed analysis of figures for 2009-10 is yet to be completed. Analysis of cause of death for 2008-09 indicates that both neonates and aged animals have higher mortality rates than for other age classes.

The Annual Inventories also report on Zoos Victoria's community service activities relating to accepting and caring for injured and orphaned wildlife. During 2009-10, 1821 animals were received by Zoos Victoria. This includes animals donated by members of the general public and those deposited by wildlife agencies. Healesville's Australian Wildlife Health Centre received 1276 animals, representing 70% of Zoos Victoria's total.

Melbourne Zoo received 532 animals and Werribee 13 animals. Many cases of donated wildlife are suffering from trauma (e.g. car accident victim), with 66% of cases received not surviving. However, some 37% (688 animals) were successfully treated and either released back into the wild, or transferred to wildlife shelters for further care and rehabilitation prior to release. Some 57 cases continue to receive care and treatment prior to release or transfer and some not suitable for release are retained within Zoos Victoria's collections.

Zoos Victoria – Animal Inventory 1 July 2009 to 30 June 2010

Animal Type	01 Jul 09	Births	Acquisition	Death	Disposition	30 Jun 10
Fish	64	5	89	68	12	78
Amphibian	381	46	65	47	47	398
Reptile	487	43	57	23	65	499
Bird	1102	286	110	206	234	1058
Mammal	718	122	51	70	77	744
Total Vertebrates Only	2752	502	291	414	435	2777

¹ Statistics reported relate only to vertebrate species (fish, amphibians, reptiles, birds and mammals). Given the short life-span, and large clutch sizes of many invertebrate species (e.g. butterflies, stick insects, and spiders), inventory details for invertebrates are not included.

² ASMP – Australian Species Management Program, the Zoo and Aquarium Association's regional species management program.

ZOOLOGICAL PARKS & GARDENS BOARD

INVENTORIES of the ANIMAL COLLECTIONS FOR THE PERIOD 1 JULY 2009 – 30 JUNE 2010

ROYAL MELBOURNE ZOOLOGICAL GARDENS HEALESVILLE SANCTUARY WERRIBEE OPEN RANGE ZOO

LEGEND

- Column 1: **Status at 1st July, 2009.**
- Column 2: **Births and hatchings** (marsupials recorded at time actual birth date, not pouch vacation).
- Column 3: **Acquisitions** (transfers in).
- Column 4: **Total deaths** (includes all deaths from natural causes, predation, accidents and euthanasia due to age or infirmity).
- Column 5: **Dispositions** (included all transfers out, escapes and releases).
- Column 6: **Status at 30th June, 2010.**
- (+) = animals held on breeding loan from another institution, not included in total figures.
- (-) = animals on loan to another institution, included in total figures.
- 1.0.0 = 1 male.
- 0.1.0 = 1 female.
- 0.0.1 = 1 unsexed.
- M = maintaining (colony for Insects, as accurate figures are not achievable).
