ZOOS VICTORIA ANNUAL REPORT

ANIMAL WELFARE PEER REVIEW COMMITTEE REPORT 2010-11

01 Introduction

It is with pleasure that I present the fourth report of the Zoos Victoria Animal Welfare Peer Review Committee. In 2008 the Zoos Victoria Board established the Committee to deliver improved accountability and transparency for animal welfare related matters for Melbourne Zoo, Healesville Sanctuary and Werribee Open Range Zoo.

Guided by a Terms of Reference, the Committee's role is to:

- + Confirm that the internal Zoos Victoria processes and protocols for handling complaints in relation to animal welfare are satisfactory and of a quality deemed appropriate;
- + Consider, monitor and review compliance with Zoos Victoria's internal processes and protocols for the reporting and investigation of issues arising from complaints or concerns about animal welfare issues within the three campuses; and,
- + Peer-review the decisions made and conclusions drawn from any investigation into issues arising from complaints or concerns about animal welfare within the three campuses.

02 Membership

The Zoos Victoria Animal Welfare Peer Review Committee comprises seven members who possess a genuine interest and commitment to animal welfare. Members represent the following categories:

- + Person(s) qualified in veterinary sciences with experience relevant to captive wildlife management;
- + Person nominated by the RSPCA;
- + Person(s) with substantial recent experience in captive management of animals who is not employed by Zoos Victoria;
- + Lay person(s) being independent community members with commitment to animal welfare including one who is qualified to practise law; and,
- + Two persons representing the Zoos Victoria Board.

The Chairperson of the Committee is a current member of the Zoos Victoria Board.

03 Activities

The Committee met on four occasions during the report period. The Committee confirmed currency of the Terms of Reference for the Committee.

The Committee was advised of six animal welfare incidents (Red-throated Parrot-finch, Eastern Snake-necked Turtle, Tawny Frogmouth, Zebra, Cuttlefish and Red-bellied Pademelon). Reports have been finalised for four incidents, with overviews of findings provided to the Committee. For these four incidents the Committee considers that the actions and investigations were undertaken consistent with Zoos Victoria internal processes, and endorses the recommended actions. Reports arising from the cuttlefish and pademelon incidents are yet to be tabled with the Committee.

Key activities undertaken by the Committee

- + The Committee reviewed draft versions of the Zoos Victoria Animal Transaction Policy, providing comments that were incorporated into the Policy.
- + The Committee noted quarterly Animal Care Reports and the annual Animal Health Report.
- + The Committee was provided with updates and final reports on investigations of incidents affecting animal welfare or wellbeing. These reports included a consideration of contributing factors and recommendations for corrective actions and to prevent a recurrence of the event.
- + The Committee considered a review of Zoos Victoria Animal welfare initiatives including additional reporting requirements that have been implemented over the past three years.
- + The Committee monitors implementation of all actions recommended in animal welfare incident reports.

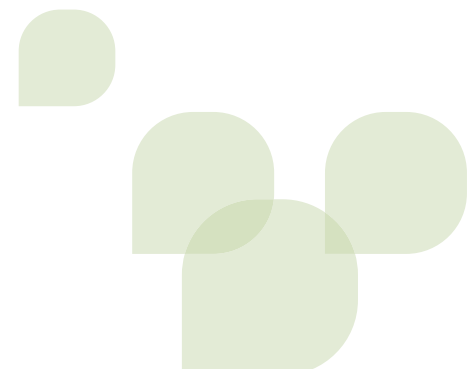

04 Inventories

I attach the animal inventories for the three Zoos Victoria properties. The Inventories Report documents changes to animal numbers between 1 July 2010 and 30 June 2011, and the total collection as at 30 June 2011. The statistics support high levels of animal care across Zoos Victoria and are consistent with industry standards.

05 Conclusion

The Animal Welfare Peer Review Committee looks forward to continuing to play an important role in assisting Zoos Victoria to deliver open and accountable animal welfare reporting and the implementation of industry best practice policies and procedures in 2011-12 and beyond.

Prof Ken Hinchcliff
Chairperson
Animal Welfare Peer Review Committee
Zoological Parks and Gardens Board
10 August 2011

ANIMAL WELFARE RELATED INCIDENTS 2010-11

Since 1 July 2010, three incidents have been reported. These incidents involved the death of an animal and investigations were completed consistent with Zoos Victoria procedures.

Red-throated Parrot-finch

Red-throated Parrot-finches have been displayed in Melbourne Zoo's Butterfly House since June 2008. The finches had taken to eating Common Grass Yellow Butterflies, so the decision was made to remove the finches from the Butterfly House. Two traps were set; two finches were successfully caught whilst a third finch sustained fatal injuries. The traps were modified and trapping re-commenced on the following day under the watch of a volunteer. Two finches were successfully caught. A third finch died instantly after being caught between the trap door and cage. The actions of the volunteer in no way contributed to this incident.

The report on this incident made two recommendations including

- + Ensure trapping procedures are carefully produced and signed off by animal husbandry staff as per institutional guidelines
- + Review all bird trapping stations and methods across the property to ensure suitability and best practice.

The Committee is satisfied that Zoos Victoria has carried out the investigation in accordance with the Animal Welfare Reporting Policy and that the management's response to the incident will mitigate future incidents of this nature. The Committee requested that Zoos Victoria re-iterate that the capture of animals should not be delegated to volunteers.

Eastern Snake-necked Turtle

Draining of a water-filled moat at Werribee was required as part of construction works for the Gorilla enclosure. The area was known to be used by Eastern Long-necked Turtle and the endangered Growling Grass Frog. Timing of drainage works occurred to minimise impact on the frogs. Whilst the moat was being drained four turtles were found with red swollen necks. On the following day a fifth turtle was found with its head caught in the inlet hose of the suction pump. All turtles sustained similar injuries which had been caused by the draining of the moat. All turtles required euthanasia. A further twenty-six turtles were found and relocated successfully.

In response to this incident two recommendations were made:

- + That protocols for emptying of Zoos Victoria lakes and moats be developed to provide for the welfare of all resident wildlife
- + That wildlife impact assessments are performed by appropriately skilled staff prior to the commencement of construction works on Zoos Victoria properties.

The Committee is satisfied that the appropriate procedures have been implemented and that the measures proposed will mitigate occurrences of this nature in the future. The Committee also requested that Zoos Victoria commission development of a device to fit on the end of the pumps to reduce the likelihood of animal entrapment while maintaining pumping capacity.

Tawny Frogmouth

Tawny Frogmouths are known to occur in the grounds of Melbourne Zoo. The species is cryptic and nocturnal in activity and is rarely seen by zoo staff. Frogmouths usually nest during spring. As part of demolition works in preparation for construction of the Hamadryas Baboon exhibit several existing trees were removed, including a large Ash that the Zoo's arborist felled by cutting through the trunk. Two days later, keepers collecting branches from the felled Ash found two dead Tawny Frogmouth chicks, and an empty nest in the felled Ash Tree.

In response to this incident two recommendations were made:

- + That protocols for pruning and felling of trees and bushes on Zoos Victoria properties be developed to ensure welfare of all resident and nearby wildlife
- + That wildlife impact assessments are performed by appropriately skilled staff prior to the commencement of construction works on Zoos Victoria properties

The Committee is satisfied that the investigation was undertaken in a manner consistent with Zoos Victoria's procedures and endorses the recommended actions.

Zebra

Zoos Victoria participates in a regional species management program for Zebra. This results in the need to regularly move the animals between zoos in the region. Werribee Zoo has successfully transferred over 40 zebras, five of which have been transferred in 2010-11. In January two Zebras were to be transferred from Werribee to Perth, using a combination of road and air transport. After loading into crates and prior to departure from Werribee one of the Zebras slipped and fell. Immediately, staff commenced the process of opening the crate to assist the animal, the Zebra was unable to stand, and collapsed and died. A post-mortem revealed the Zebra had sustained a fractured hip as a result of the fall.

In response to this incident three recommendations were made:

- + That the transport crate floor be altered to ensure additional non-slip modifications are completed prior to proceeding with transport of remaining Zebra "Ty" to Perth Zoo.
- + That detailed Zebra Crate design specifications be developed to include specific details on strength and type of construction materials, dimensions and structural configurations, requirements for lifting (e.g. forklifts), details of style and reinforcement of sliding doors, detailed requirements for crate floors to provide adequate grip and prevent slipping and ventilation requirements, and make this information available to all Australasian institutions involved with transport of Zebra.
- + That Zoos Victoria's Animal Transaction Policy is amended to include provision for monitoring, when required, of animals during transfer.

The Committee considers that the investigation was undertaken in a manner consistent with Zoos Victoria's internal procedures and endorses the recommended actions. The Committee also requests that Zoos Victoria develops a specific protocol for the transport of Zebra.

OVERVIEW OF ANIMAL INVENTORY

As at 30 June 2011 Zoos Victoria's living animal collection¹ numbers over 3000 individual vertebrate animals and includes some 300 species. The following points are noted relative to the changes in animal collection numbers during the reporting period:

- + Ongoing significant achievement of Healesville's Sanctuary's Threatened Species Unit including successful breeding of 32 Corroboree Frog, 670 Spotted Tree-frog, 33 Orange-bellied Parrot, 13 Helmeted Honeyeater, 19 Tasmanian Devil and 38 Mountain Pygmy-possum
- + Transfer of animals to support ASMP² managed species programs including Cheetah, Zebra, Przewalski's Horse, Giraffe, Addax and Scimitar Oryx at Werribee Open Range Zoo
- + Successful breeding to support ASMP managed species programs including Asian Elephant and Bongo at Melbourne Zoo and Zebra, Addax and Scimitar Oryx at Werribee Open Range Zoo

- + At Melbourne Zoo, notable success with breeding primates including Emperor Tamarin, Black-handed Spider-monkey, Black-capped Capuchin and Sumatran Orang-utan, some of these births support ASMP Programs

- + Releases into the wild to support Recovery Programs, including Helmeted Honeyeater and Eastern Barred Bandicoot

The annual inventories report a total of 1,194 births at the three properties. Breeding is scheduled either to support collaborative species management programs, recovery programs or in-house management programs. Effective reproductive controls are an important component of breeding programs, methods including contraception and separation of sexes are used to prevent breeding as required.

Over 2,000 animal transfers are reported including 862 acquisitions and over 1,200 dispositions. Whenever animals are transferred to or from Zoos Victoria properties there is a need to satisfy any permitting requirements of legislative agencies.

The annual inventory reports the death of 633 animals across the three properties and detailed analysis of contributing factors will be presented in Zoos Victoria's Annual Animal Health Report.

The Annual Inventories also report on Zoos Victoria's community service activities of accepting and caring for injured and orphaned wildlife. During 2010-11, 1,670 animals were received by Zoos Victoria. This includes animals donated by the community and those deposited by wildlife agencies. Healesville Sanctuary's Australian Wildlife Health Centre received 1,257 animals, representing 75% of Zoos Victoria's total and Melbourne Zoo received 413 animals. Many native animals that are donated are often suffering trauma (e.g. car accident victims) and so 68 per cent of these cases did not survive. However, 32 per cent were successfully treated and either released back into the wild, or transferred to wildlife shelters for further care and rehabilitation prior to release. Approximately 42 cases continue to receive care and treatment prior to release or transfer. Those not suitable for release are retained by Zoos Victoria.

Zoos Victoria – Animal Inventory 1 July 2009 to 30 June 2010

Animal Type	01 Jul 10	Births	Acquisition	Death	Disposition	30 Jun 10
Fish	90	0	307	185	7	205
Amphibian	390	727	134	61	720	470
Reptile	488	94	78	49	85	526
Bird	1132	245	267	230	301	1113
Mammal	766	196	76	107	103	828
Total Vertebrates Only	2866	1262	862	632	1216	3142

Note: There may be slight variations in total specimen numbers between this table and the summary tables in the inventory of each property. This is due to the fact that the inventory numbers account for all animals in our collection, including those on loan to other zoos and institutions. The above table relates to all animals on site at the three properties.

¹ Statistics reported relate only to vertebrate species (fish, amphibians, reptiles, birds and mammals). Given the short life-span, and large clutch sizes of many invertebrate species (e.g. butterflies, stick insects, and spiders), inventory details for invertebrates are not included.

² ASMP – Australian Species Management Program, the Zoo and Aquarium Association's regional species management program

INVENTORIES of the ANIMAL COLLECTIONS FOR THE PERIOD 1st JULY 2010 – 30th JUNE 2011

ROYAL MELBOURNE ZOOLOGICAL GARDENS HEALESVILLE SANCTUARY WERRIBEE'S OPEN RANGE ZOO

LEGEND

Column 1:	Status at 1st July, 2010.
Column 2:	Births and hatchings (marsupials recorded at time actual birth date, not pouch vacation).
Column 3:	Acquisitions (transfers in).
Column 4:	Total deaths (includes all deaths from natural causes, predation, accidents and euthanasia)
Column 5:	Dispositions (included all transfers out, escapes and releases).
Column 6:	Status at 30th June, 2011.
(+)	= animals held on breeding loan from another institution, not included in total figures.
(-)	= animals on loan to another institution, included in total figures.
1.0.0	= 1 male.
0.1.0	= 1 female.
0.0.1	= 1 unsexed.
M	= maintaining (colony for Insecta, as accurate figures are not achievable).
I	= intermittent (colony for Insecta, population size varying).
D	= discontinued (colony for Insecta, no longer in the collection).
